EDUCATION

Multimedia University

Ayeh Keroh, Melaka

Bachelor of Computer Science (Honours) (Artificial Intelligence)

Jul 2023 — Jul 2026

- Cumulative GPA: 3.92/4.0 | Dean's List
- Relevant Coursework: Computer Programming, Operating Systems, Database Systems, Data Structures and Algorithms, Object-Oriented Programming, System Analysis and Design, Machine Learning, Software Engineering Fundamentals, Web Techniques and Application, Computer Vision, Computer Networks

WORK EXPERIENCE

Frontend Developer Intern

Jul 2025 — Oct 2025

Softinn Solutions Sdn Bhd

Ayeh Keroh, Melaka

- Developed the company's new official website using HTML, CSS, JavaScript, and Bootstrap within an ASP.Net Core framework to ensure a responsive, high performance user experience across all device types.
- Worked on the frontend side of product development, collaborating closely with backend engineers and UI/UX designers to translate wireframes into functional, interactive features.
- Developed user interfaces and integrated RESTful APIs for the company's products using Angular, managing CRUD operations to ensure seamless data flow and real-time interface updates.

PROJECTS

HealthNavigator (Final Year Project) ([GitHub](#))

Mar 2026 — Present

- Developed a full stack personal health assistant chatbot application powered by Hybrid Retrieval-Augmented Generation (RAG) architecture to deliver highly accurate, hallucination-free healthcare insights.
- Designed a Hybrid RAG pipeline that intercepts user queries and simultaneously routes them through a vector similarity search (Qdrant) and a Cypher-based graph traversal (Neo4j) to compile highly robust LLM context.

Event Ticketing System Platform ([GitHub](#))

Mar 2026 — Present

- Developed a full-stack ticketing application using a robust Spring Boot backend and a fast TanStack Start frontend (powered by Bun), optimizing page load speeds with server-side rendering (SSR).
- Implemented database locking mechanisms to safely process simultaneous checkout requests, completely eliminating the risk of double-booking tickets during high-traffic events.
- Engineered a secure authentication system using strict HTTP-Only cookies and Spring Security to protect user accounts from Cross-Site Scripting (XSS) attacks.

Diabetes Prediction using Machine Learning ([GitHub](#))

Mar 2025 — Jun 2025

- Trained a high-accuracy predictive model to identify diabetes risk in 100k patients using a clinical dataset, achieving 96% accuracy and a 0.80 F1-Score.
- Performed IQR-based outlier detection, handled categorical encoding for clinical variables (smoking history, gender), and removed 3,800 duplicate records to ensure data integrity.

EXTRACURRICULAR ACTIVITIES

Deriv AI Hackathon 2026

Feb 2026 — Feb 2026

- Developed an agentic HR platform using LangGraph and LangChain to automate complex document workflows, including automated contract generation and policy retrieval during the hackathon.
- Implemented a RAG-based HR assistant that leverage ChromaDB and HuggingFace Embeddings to provide context-aware HR guidance.

SKILLS

- **Languages:** HTML/CSS, JavaScript, TypeScript, Python, C/C++, Java, Golang, SQL
- **Frameworks & Technologies:** React, Next.js, Angular, Tailwind CSS, Node.js, Bun, Git, Spring Boot, Docker, FastAPI, LangChain, LangGraph, PostgreSQL, Postman
